

## **\*\*Eco Fuego Heater User Manual\*\***

Thank you for choosing the Eco Fuego Heater.  
To ensure the best performance and a long lifespan, follow these simple steps carefully.

### **\*\*Safety Precautions\*\***

1. Make sure your Eco Fuego Tech heater is properly installed and that there are no fire hazards or flammable materials nearby. **Always exercise caution when using your heater, as the surfaces become hot during operation.**
2. Ensure that the tank beneath the heater contains an adequate amount of waste oil. For proper operation of the Heater, **do NOT use mixed oils with WATER, antifreeze, or other dirty liquids.**  
**Stay away from gear lubes, they do not burn and will cause your waste oil heater to malfunction.**  
**WE RECOMMEND USING: WASTE MOTOR OIL.**

### **\*\*Setting Your Heater\*\***

3. Choose your desired setting by turning the knob to either the "8-hour extra-high heat" automatic setting or a "12-hour regular high heat" automatic setting. The heater will shut off automatically after these hours as a safety feature.

### **\*\*Operation Steps\*\***

- \*\*Step 1:\*\*** After choosing the desired heater setting, the light will flash to remind you to clean the burner, located inside the heater. Ensure it's cleaned every day before using the heater. A weekly deep cleaning by scraping the inside of the burner is necessary for proper function.
- \*\*Step 2:\*\*** Pour your choice of igniter fuel into the burner. We recommend using 150 milliliters of diesel fuel.
- \*\*Step 3:\*\*** Next, ignite the burner.
- \*\*Step 4:\*\*** Close the door and press the red button on the control panel for 3 seconds.

### **\*\*Automatic Operation\*\***

From this point on, everything is automatic. The Electronic Feeding System will begin feeding the fire with used motor oil. (This may take a couple minutes)

Now, you can enjoy a warm workshop, ensuring optimal performance for your tasks.

\*Thank you for choosing the Eco Fuego Tech heater. Stay warm, work efficiently, and experience the difference.\*
